FIELD SEEDS & SEED GRAIN

Our North Dakota grown kiln dried corn matures every season

FARGO SEED HOUSE

Operated by Magill and Company

FARGO, NORTH DAKOTA

FEBRUARY 3, 1920.

IN presenting this issue of our 1920 FIELD SEED and SEED GRAIN price list, we wish to take the opportunity to thank all our old friends and customers for their past patronage. Profiting by our thirty-three years of experience as seedmen in the Northwest we have improved our equipment and enlarged our facilities so that we can handle efficiently and promptly our ever increasing business, we, therefore, welcome new trade connections as well as increased favors from old customers.

We fully appreciate our responsibility as seedmen and have labored incessantly in improving and maintaining the quality of our seeds and can assure the trade that our greatest ambition shall be to deserve your confidence by striving ever to increase our present standard as to **QUALITY and SERVICE.**

Our old customers are well acquainted with our standards of quality and methods of doing business, but to our new and prospective customers we want to say that, since our firm was first organized it has been our greatest desire to promote the interests of agriculture throughout the Northwest and to offer only such variety of seeds as we know will do well and are adapted to your climatic conditions.

We have labored constantly to help produce and offer to the trade improved varieties of seed grain, grass and seed corn and we do feel that these new varieties together with the general high standard of quality which we know to be represented in every shipment which we make have been in a large degree reflected in the continued prosperity of the Northwest.

When purchasing seed grain do not overlook the fact that this is your most important annual investment, that the best suited varieties and choicest quality cost very little more per acre than the ordinary seed, yet the extra profit is enormous as you are thus insured larger yields, better quality and cleaner fields, all of which requires no greater expenditure for labor and machinery.

We are located in the very heart of the great Northwest where most small grains reach their highest state of maturity and have built our vast volume of business through the reputation which follows the furnishing of these choicest of seed grains which can always be depended upon to produce a crop of the greatest vitality.

THE NORTH DAKOTA SEED LAW is one of the most strict of any in the United States, and as we are located here at Fargo under the very shadow of the State Control Seed Laboratories, our stocks are at all times subject to the most rigid inspection and it is our ambition that every shipment be of even higher quality than that prescribed by our STATE PURE SEED LAW AND DEPARTMENT OF FEDERAL CONTROL.

NO WARRANTY.—We exercise extreme care in the filling of all orders, but we give no warranty, expressed or implied, as to quality, description, or productiveness, or any other matter of any seeds we send out, and will in no way be responsible for the crop.

This non-warranty is similar to that used by all seed houses and we recommend that you test seeds on arrival and if they do not meet your requirements return them at once at our expense and we will cheerfully refund your money.

SAMPLES.—We furnish samples of our seed grain and field seeds, free of charge, to prospective buyers on request. When orders are placed from samples please give us approximate date you received the sample; also stock number.

ORDER EARLY.—As market conditions are very unstable again this season, and as fancy stocks are going to be hard to replace, we strongly recommend that our customers place their orders early, thereby taking advantage of the low prices which we present in this first issue of our 1920 price list.

PRICES SUBJECT TO CHANGE.—The prices quoted herein are based on market conditions at the time this list is issued and are subject to change without notice.

We do not alter prices except in extreme cases, but if your list is an old one and you have occasion to presume that the prices are either higher or lower, just write us for current list before ordering and we will supply one at once.

TERMS OF SALE.—Cash must accompany order and should be in the form of money order or bank draft, or currency by registered mail. We will accept postage on remittances of \$1.00 or less if you find it more convenient to use this method.

ORDERS PROMPTLY FILLED.—But in case of delay you will be notified by letter explaining cause of such delay and advised when shipment will be made.

If you do not hear from an order sent us, within a reasonable length of time, send us duplicate, stating amount of remittance, and be sure to give your name and full address.

We will appreciate your inquiries and are always glad to advise regarding the best crops and varieties for your particular soil and climatic conditions.

Assuring you that no order is too small to merit our most careful attention,

YEARS

FARGO SEED HOUSE

HOME GROWN SEED CORN.

Government statistics show that the Corn Crop of the past season was North Dakota's one crop which showed a normal yield as it suffered from neither drought or rust.

As the low temperatures during the last half of October ruined the germination of most corn then in the fields we need hardly remind you of the grave importance of procuring Northern grown Seed Corn for your 1920 planting from a source known to be thoroughly reliable.

The bulk of our stocks have been grown from seed of our own selection and breeding, and the crops brought to the highest state of maturity under our personal supervision, after which they were gathered either in September or early in October, kiln dried, graded and tested, and you can depend on these varieties which we are offering to produce a matured crop next fall if given a reasonable season and proper cultivation.

With our increased facilities and improved modern methods of handling and curing, we have succeeded in saving a large stock of this excellent **Home Grown Corn**, all of which will show strong germination and is sure to please thousands of our most exacting customers.

You have no doubt experimented in past seasons with Southern Grown Seed Corn, and are well aware of the extra hazard being taken in planting any other than these **Home Grown** varieties, so to you who have experimented in the past let us appeal again this season to not be "sold" on the seed grown in Southern or Central States.

Do not be deceived by the claims of Southern and Eastern dealers that North Dakota Corn is not fit for seed; we have labored on this problem for the past 21 years and have demonstrated conclusively that Northern Grown Corn can be dried artificially so that it makes excellent seed of the strongest vitality every season.

Our years of experience have taught us that one of the most important assets of the Seed Corn expert is his ability to intelligently advise what varieties are best adapted for certain localities. This we are able to do and you will always find us conservative in our recommendations and claims. This does not cover a crop guarantee, but under normal weather conditions, means we can recommend to you varieties which will not only mature but will produce the results you are looking for.

Grading.—The bulk of our Home Grown Seed Corn is grown by us under contract from seed of our own selection.

All corn is first selected at husking time, then a more careful selection is made when the ear corn goes to the driers, and once again when on the way from the driers to the shellers. Later, after shelling, the corn is graded to size and shape so that it will feed in the average corn planter to best advantage.

Testing.—All lots of seed corn are tested for germination when the drying process commences and we continue these tests at stated intervals up to and including time of delivery.

There is no crop produced here in the Northwest to which the ripening season is more vital, and hardness so prime an essential.

Try our "**Fargo Brand**" Seed Corn this year and be convinced. When shelled it comes put up in seamless bags, for which we make an extra charge sufficient to cover actual cost.

NORTH DAKOTA GROWN CORN.

Northwestern Dent.—This variety is in a class by itself, being grown in many Northwestern localities to the exclusion of all other varieties as it consistently matures every season, furnishing not only a choice quality of grain but also an abundance of excellent fodder. The type has become well established, being the result of a cross between a red flint and a yellow dent, retaining the early maturing characteristics of the former and high feeding qualities of the latter.

This seed which we are offering comes from stock which we have been improving for many seasons past through most careful scientific selection until we now have a well established type of Red Corn which matures in 85 days, having ears of good size, averaging about nine inches long, bearing from ten to fourteen rows. Yields of from seventy to seventy-five bushels per acre are not uncommon. Grown in Cass County.

Shelled, per bushel..... **\$3.50**
On Cob, per crate of 70 lbs..... **5.50**

North Dakota Golden Dent.—The earliest dent variety which has ever been produced. Beautiful yellow, well formed ears which are produced well up on rather a slender stalk which can readily be harvested with a corn binder. Much in demand with feeders for the early fall finishing of cattle. Grown in Sargent County.

Shelled, per bushel..... **\$3.75**

Minnesota No. 13.—Leading standard variety which originated at the Minnesota Experiment Station and is especially noted for its early maturity, enormous productiveness and its adaptability to most soil and climatic conditions. Handsome yellow ears bearing from sixteen to twenty rows of wedge shaped kernels packed closely on the cob from butt to tip. Grown in Sargent County.

Shelled, per bushel..... **\$3.25**
On Cob, per crate of 70 lbs..... **5.25**

North Dakota White Dent.—The earliest of White Dents which matures in ninety days and consistently outyields the yellow dent varieties, especially when planted on poor worn-out soils. Ears grow well up on stalk so that it can be harvested with binder. Grown in Cass County.

Shelled, per bushel..... **\$3.25**
On Cob, per crate of 70 lbs..... **5.25**

King Philip Flint.—An extra early red flint which has always been a favorite with Northern growers, as it is perfectly hardy and can be relied on to produce a matured crop of grain in addition to which the stalks are slender and leafy, providing an abundance of the choicest fodder. Grown in Sargent County.

Shelled, per bushel..... **\$3.50**

Gehu Flint.—One of the earliest and most popular varieties of flint grown in the Northwest. Kernels are a bright yellow and ears develop up high enough on stalk so that harvest can be accomplished with a binder under favorable growing conditions. Will mature in eighty days and yields of seventy bushels per acre are common. Grown in Burleigh County.

Shelled, per bushel..... **\$3.25**

White Squaw Flint.—An extremely early maturing flint which is a very heavy yielder; very popular for "hogging off" as ears grow close to ground. This is a dwarf variety which is not especially recommended for the production of fodder, but is always sure to mature. Grown in Burleigh County.

Shelled, per bushel..... **\$3.25**

ALL PRICES F. O. B. FARGO OR MOORHEAD.

FARGO SEED HOUSE

MINNESOTA GROWN CORN.

Minnesota No. 13.—The parent stock of this seed was propagated at the Minnesota Experiment Station and we have endeavored to retain the earliness and type by a constant, careful selection of seed stock. On a normal season this stock will mature in 90 days, and there is no variety which will produce a heavier yield. Grown in Sherburn County.

Shelled, per bushel..... \$3.00
On Cob, per crate of 70 lbs..... 5.00

Minnesota No. 23.—An 85 day White Cap Yellow Dent Corn, which also originated at the Minnesota Experiment Station. Shapely, uniform ears well filled to tip and butt; especially adapted for Northwestern Minnesota soil and climatic conditions where it is generally accepted as the standard variety. Stalks grow about six feet high and the ear is borne approximately three feet from the ground, so that it is easily harvested with a corn binder. Grown in Sherburn County.

Shelled, per bushel..... \$3.00

Rustler White Dent.—A heavy yielding, early variety which is well adapted to Northwestern conditions, being especially suited to South Central North Dakota, Northern South Dakota and Central Western Minnesota. Produces large, uniform ears which are closely filled with deep white kernels. The stock which we offer was awarded first premium at the Redwood County Fair, in which county it was grown.

Shelled, per bushel..... \$3.00
On Cob, per crate of 70 lbs..... 5.00

Mercer Flint.—A magnificent extra early yellow variety, heavy yielder, producing ears about three feet from the ground on a very leafy stalk seven feet high, making this one of our most popular of the early maturing fodders. This variety matures in eighty-five days and is very prolific, yielding as high as one hundred bushels of sound, nicely shaped ears to the acre. Grown in Wright County.

Shelled, per bushel..... \$3.50

Smut Nose Flint.—A very popular yellow flint blazed with red at end of ear. Cob is small and kernels large and broad, averaging eight rows and ears ten inches in length. Heavy yielder and early; with ears well up on stalk, permitting easy harvest with binder. One of our earliest varieties which is very popular in many localities.

Shelled, per bushel..... \$3.50

Pop Corn, White Rice.—Choicest of rice shaped pearly white kernels. The most satisfactory of our early maturing, heavy yielding varieties for Northwestern conditions. Can be made one of your best paying crops, as a ready market is always available for popping purposes and as it can be planted much closer than the larger growing varieties, can be made to produce as high as eight tons of finest fodder per acre.

Shelled, per bushel..... \$6.50

Pop Corn, Japanese Hulless.—This variety makes about 40 per cent more bulk when popped than other varieties, so can always be depended upon to bring the highest market values. Is hardy and always sure to mature, especially on the sandy lighter soils. Big money is often made on small ventures. Plant an acre or two and be convinced.

Shelled, per bushel..... \$10.00

FODDER CORN—ALL SOUTHERN GROWN.

The sowing of fodder corn has become almost universal as it provides an excellent forage crop, producing more tons of feed per acre than any other grain or grass. Can be sown late in the season when other forage crops are a failure, also permitting of early summer tillage during May and June. All varieties which we offer below are especially adapted for Northwestern conditions and make ideal feed for all classes of live stock.

Mammoth Yellow Dent Fodder.—One of our most popular varieties which is growing in favor, its characteristics being a slender stalk with an abundance of leaves, thus producing a heavy tonnage of excellent quality fodder which is very high in food value, having well formed ears in addition to a well cured stalk.

Shelled, per bushel..... \$2.00

Mammoth White Dent Fodder.—A tall growing, leafy variety with characteristics similar to the Mammoth Yellow. Should be drilled in at the rate of at least one bushel to the acre for best results, is easily harvested and makes an excellent quality of both fodder and silage.

Shelled, per bushel..... \$2.00

Evergreen Sweet Fodder Corn.—Is much in favor with dairy farmers as the feed is high in sugar content, when drilled in at the rate of 1½ bushels to the acre. Stalks are tall and slender being covered with an abundant leafy growth which will not only increase but maintain a maximum flow of milk.

Shelled, per bushel of 45 lbs..... \$4.25

Sugar Cane.—Makes one of the very best crops of fodder when drilled with ordinary grain drill at rate of 50 lbs. to acre; produces sweet, tender fodder, which is of high food value for cattle, horses and hogs, either as roughage or silage. Every Northwestern farmer should grow some, as it is a great drought resister and sure to provide a heavy tonnage of choice feed even with a rainfall way below normal.

Per 100 lbs..... \$4.00

Kaffir Corn.—Is constantly growing in favor with our Northern farmers, especially in the sub-arid districts as it is one of our greatest drought resisting forage crops. When drilled in rows at the rate of 30 lbs. per acre produces abundance of hay, easily grown and makes one of the best fodders for horses and cattle when harvested just as it begins to tassel.

Per 100 lbs..... \$4.00

Sudan Grass.—A new annual forage crop of immense value to the West. It resembles Sugar Cane, but grows a finer stalk, and reaches a height of 6 to 9 feet. Sow 4 to 6 pounds of seed per acre in rows 18 to 24 inches apart, or drill 15 pounds per acre. One of our best drought resisting forage crops—heaviest yielding of any hay crops as it can be harvested with either a mower or binder, from two to three times per season.

Per 100 lbs..... \$16.00

Sunflower, Mammoth Russian.—Easily grown and makes an excellent addition to any poultry ration as the grain is very rich in both oil and protein.

This variety is also being grown with success as a silage, especially in Western North Dakota and Montana.

Per 100 lbs..... \$17.00

SEAMLESS BAGS EXTRA 65 CENTS EACH.

FARGO SEED HOUSE

SEED GRAIN.

Canadian Marquis Wheat.—A variety of hard spring wheat which was originated by crossing the Red Fife with acclimated Calcutta Red, thereby combining the early maturing features of the former and exceptional qualities and appearance of the latter; beardless, heavy yielding, and one of the earliest maturing varieties of hard wheat known.

Per bushel..... \$3.60

Velvet Chaff Wheat.—A bearded, smooth chaffed variety which is very hardy and a big yielder, maturing ahead of most spring wheat and in some sections consistently outyields other varieties.

Per bushel..... \$3.50

Kubanka Durum Wheat.—An amber macaroni having compact bearded heads which is growing rapidly in favor, especially in sub-arid districts of North Dakota and Montana. Straw is strong and healthy, resisting the ordinary black rust attacks. Owing to tightness of hull it neither shells or suffers damage from hail except in the case of extreme storms.

Per bushel..... \$2.90

D-5 Rust-Proof Red Durum Wheat.—This variety is growing in favor in North Dakota as it is immune to black rust and resists extremes of weather which no other wheats seem to endure. Not in favor with the millers but many farmers continue growing it as they are assured of heavy yields which means satisfactory returns even though the price per bushel is below that of the Amber Durum and hard wheats.

Per bushel..... \$2.75

60-Day Oats.—One of the earliest varieties we have been able to produce, maturing in July, thus admitting of harvest before wild oats and other noxious weeds ripen. Outstanding as a heavy yielding variety. Sow early for best results.

Per bushel..... \$1.25

Swedish Select Oats.—A very popular early variety, heavy yielder, even on light soils. Large branching heads filled with bright, plump grain. Stiff coarse straw and seldom lodges.

Per bushel..... \$1.20

White Russian Oats.—A late side oat, very free from rust, heavy yielder and its wide range of adaptability to soil and climatic conditions makes it one of our most satisfactory varieties.

Per bushel..... \$1.25

Gold Mine Oats.—An early yellow variety of branching habit. Heavy yielder and well adapted to Northern climatic conditions.

Per bushel..... \$1.15

Big Four Oats.—Heavy branching, good yielder even in light soil. Stiff straw which withstands all ordinary storms.

Per bushel..... \$1.15

Silver Mine Oats.—Early, heavy yielding variety which is noted for its quality. Seldom lodges as heads are borne low on a strong stiff stalk.

Per bushel..... \$1.15

Oderbrucker Barley.—One of the favorite bearded six-row varieties which is pronounced in quality and yield, a heavy plump kernel excelling in feed value. In stiffness of straw and rust resistance it is superior to other varieties.

Per bushel..... \$2.10

Manshury Barley.—Early in maturity and vigorous of growth, yields an abundance of plump best quality grain. Straw is stiff and strong and has but seldom been known to lodge.

Per bushel..... \$2.00

Wisconsin No. 5 Barley.—Best six-row barley produced at Wisconsin Experiment Station. Noted for its plumpness and uniformity of grain, stiffness of straw and vigorous growth.

Per bushel..... \$2.15

Hulless Barley.—This variety of barley is very popular with stockmen as it is both beardless and hulless. Weighs 60 pounds per measured bushel and is an enormous yielder; straw makes excellent hay.

Per bushel of 48 lbs. \$3.25

Speltz.—Farmers in the Northwest cannot afford to be without it. It produces a good yield under adverse conditions, even where other crops often fail. It will stand more dry weather than any other grain crop as it is a good drouth resister. It produces more food value per acre than any other of our grains and is a most valuable feed for all kinds of stock. The plant is almost entirely free from rust and smut and does not lodge.

Per bushel..... \$1.75

Pure Russian Flax.—The choicest of seed which has been grown on breaking, perfectly hardy for sowing any place in the Northwest, as it readily adapts itself to all soil conditions. Grow it on land which has not been recently planted to flax and be assured of a good yield.

Per bushel..... \$5.80

Primost Flax No. 25.—One of the best varieties produced by Minnesota Experiment Station and is pronounced by this same authority as the heaviest yielding variety which they have been able to produce.

Per bushel..... \$5.90

North Dakota Resistant No. 52 Flax.—This variety was bred up by Prof. H. L. Bolley of the N. D. Experiment Station for a wilt resistant variety. He commenced work on it in 1900 and first put the seed in farmers' hands, in small quantities, in 1908. This is the seventh year we have been able to secure any of it to offer to our customers and the supply is limited.

Per bushel..... \$5.90

N. D. No. 114 Flax.—It is a hardy, heavy yielding strain. Among its strong points is its capacity for yield and grade, distinctive features being a small brown seed, one of the surely resistant varieties which is best adapted for heavy soil conditions in the Red River Valley. This variety has been known commercially but a few years and in fact was first distributed by the North Dakota Experiment Station so recently that there has been but little opportunity for it to become mixed with other varieties. This variety will retain its resistance to wilt just so long as the crop is properly handled and no mixing permitted. The stock we are offering was grown by one of North Dakota's most careful and expert seed growers and is known to be pure bred seed.

Per bushel..... \$6.00

ALL PRICES F. O. B. FARGO OR MOORHEAD.

FARGO SEED HOUSE

Spring Rye.—One of the surest small grain crops for North-western farmers, as it can be relied on to produce profitable returns regardless of drouth and other adverse climatic conditions, thriving even on light sandy soils; very hardy and can be sown early, just as the frost is leaving the ground. We offer North Dakota grown stock of good quality.

Per bushel..... \$2.25

Winter Rye.—Makes excellent pasture when sown in spring as it stools more freely than the spring variety and never suffers from early freezing. This winter variety will, however, not mature into a grain crop when planted in the spring, but after serving its function as a green pasture can be plowed under as a fertilizer.

Per bushel..... \$1.90

Buckwheat.—Can be seeded very late and is of great value as a catch crop as it is often sowed in July; highly recommended to turn under when green; it smothers weeds and is fine for fertilizer.

Per 100 lbs..... \$4.25

Hog Pasture Mixture.—This mixture is made after a formula furnished by Government Experiment Station; produces abundance of highly nutritious pasturage.

Per 100 lbs..... \$6.00

Dwarf Essex Rape.—Furnishes an immense amount of green feed, and its feeding value is nearly twice that of clover. It may be sown any time from early spring until late in summer, with grain or alone. From 5 to 10 lbs. of seed per acre is sufficient, less if sown with grain.

Per 100 lbs..... \$12.00

Canada Field Peas.—Make an excellent feed for horses, sheep, hogs and milch cows; equal in feed value to corn and a month earlier in maturity. A crop which is profitable, also returns to the land abundance of nitrogen; can be grown under almost any soil and climatic conditions and second only to clover in soil enriching properties. Sow either alone or with oats or barley.

Per bushel..... \$4.25

Marrowfat Field Peas.—Very productive, rich cream color and Northern Minnesota grown. A heavy yielding variety well adapted to Northwestern conditions.

Per bushel..... \$4.75

Hemp Seed.—Being grown in the Northwest for fibre it should be seeded at about 30 lbs. per acre. Fine soiling crop and produces such a dense foliage that authorities recommend same in eradicating quack and other noxious weeds.

Per 100 lbs..... \$20.00

Winter Vetch.—Is one of our most valuable legumes which brings an enormous amount of fertility to the soil and provides fine pasturage.

Per 100 lbs..... \$23.00

White Navy Beans.—Choice hand picked, straight variety, stock grown in North Dakota.

Per bushel..... \$5.50

Great Northern Beans.—A pure white, kidney shaped bean of the most pleasing flavor. Very early in maturity and heavy yielder. Stock grown in Montana and is very choice.

Per bushel..... \$5.75

MILLET.

Millets of all varieties should be sown in North Dakota after June 1st, for best results.

Golden Millet, Home Grown.—One of the best varieties for hay making. An excellent cattle feed when cut just as it reaches full bloom, on rich soil will produce about four tons of hay per acre. Many localities in the Northwest grew a good crop of choice heavy seed the past season, which we are able to offer at reasonable prices.

Per 100 lbs..... \$3.50

Golden Millet, Southern Grown.—As most of the North-western millet acreage is for hay purposes we offer this Southern grown seed which grows much taller than home grown seed, thus producing a heavier, finer hay which makes the best of feed for dairy cows. On good rich soil this variety grows from four to five feet high and produces about five tons per acre.

Per 100 lbs..... \$5.50

Siberian Millet, Home Grown.—Our earliest maturing variety, extremely hardy, withstanding drought to a marked degree. Stools freely thus making hay of very choice quality which is high in food value as a cattle feed.

Per 100 lbs..... \$3.50

Siberian Millet, Southern Grown.—Has the same general characteristics as the Northern Siberian except in that it grows much taller, yielding a heavier tonnage of hay per acre. Choice heavy seed of best quality.

Per 100 lbs..... \$4.00

White Proso Millet.—A large seeded millet introduced by Prof. Hanson. Yields well in our sub-arid districts of Dakota and Montana on the driest of seasons.

Per 100 lbs..... \$10.00

White Wonder Millet.—A new variety which is rapidly growing popular here in the Northwest, distinctive features being its early maturity, heavy leafy foliage, thus producing immense amount of desirable fodder which is easily cured. Its dense growth makes it possible for this crop to easily conquer noxious weeds.

Per 100 lbs..... \$6.00

Japanese Millet.—Grows very rank and produces an immense yield of coarse hay that is much relished by all kinds of livestock. Claimed by many feeders to be even superior to fodder corn as a roughage. Entirely different from other millets in that it grows from five to seven feet high, being well adapted for moist low lands.

Per 100 lbs..... \$12.00

Hog Millet, Home Grown.—Seed which yields enormously as a grain crop, popular in districts where corn cannot be matured, as this seed is of high value in the fattening of swine, cattle and poultry. Makes good hay when cut very young. Choice first quality seed.

Per 100 lbs..... \$3.50

Early Fortune Millet, Home Grown.—A variety which is growing in popularity here in the Northwest as it matures in about 40 days, is a most attractive seed, being a beautiful red and about twice the size of Golden Millet. It produces a large yield of both seed and fodder and may be fed to both horses and cattle without injury, even when cut after the seed has matured. We offer North Dakota grown seed which has been thoroughly re-cleaned and of highest quality.

Per 100 lbs..... \$3.50

SEAMLESS BAGS EXTRA 65 CENTS EACH.

FARGO SEED HOUSE

GRASS SEED.

Bromus Inermis.—The great drought and frost resisting grass for both hay and pasture. It starts in the spring two weeks earlier than the native prairie grasses and is still green in the fall after all other varieties are dead. Choice seed which we recommend as quack free.

Per 100 lbs., sacked..... \$28.00

Slender Wheat Grass.—(Often called Western Rye Grass). Affords excellent pasture and provides large quantities of hay; will thrive under very dry conditions on light soil; also thrives on alkali soil where other grasses fail.

Per 100 lbs., sacked..... \$20.00

Timothy.—Is the most important of all hay grasses as it adapts itself to such a wide range of soil and climatic conditions.

Per 100 lbs..... \$14.00

Timothy and Red Clover Mixed.—Choice Minnesota grown with sprinkling of Red Clover, just as grown together.

Per 100 lbs..... \$18.00

Timothy and Alsike Clover Mixed.—This represents a mixture just as grown together and the sprinkling of Clover is just right to make excellent hay.

Per 100 lbs..... \$18.00

Blue Grass, Choice Kentucky.—Makes the choicest of pasture for all kinds of stock—is very hardy and withstands the extreme temperatures of our coldest winters as well as the hot dry summers.

Per 100 lbs..... \$30.00

Red Top.—Is a native of our Northern prairies and adapts itself especially to low moist lands. Makes very fine hay and pasture and much in demand for mixing with other grasses. We offer the choicest quality solid seed.

Per 100 lbs..... \$23.00

Lawn Grass Mixture.—Our Fargo Brand Mixture contains the choicest varieties which are particularly adapted to our Northern climatic conditions.

Per 100 lbs..... \$40.00

Medium Red Clover.—This is a choice hardy lot of heavy dark colored clover grown in Northern Minnesota, which we recommend most highly for sowing here in North Dakota.

Per 100 lbs..... \$57.00

Mammoth Red Clover.—Of high value for both hay and pasture, produces well on light sandy soil. Minnesota grown seed.

Per 100 lbs..... \$57.00

Alsike Clover.—One of our hardest varieties which does well even on low moist land and withstands pasturage better than the Red Clovers. Minnesota grown.

Per 100 lbs..... \$58.00

White Clover.—A low growing variety which will stand very close cutting and pasturage. Much used as a mixture with other permanent grasses.

Per 100 lbs..... \$65.00

Sweet Clover.—(White Flowering Biennial). A valuable plant for both hay and pasture; also of high value as soiling crop.

Per 100 lbs..... \$34.00

Per 100 lbs., Scarified..... \$36.00

Yellow Flowering Biennial—Per 100 lbs..... \$33.00

Per 100 lbs., Scarified..... \$35.00

NORTHERN GROWN ALFALFA.

Alfalfa is rapidly becoming a necessary crop to every Northern farmer, and the production of seed here in the Northwest is increasing annually, it is recognized by all authorities that this Northern grown stock is preferable to that grown in the South Central States or in Europe.

Remember that instead of wearing out and exhausting the soil, Alfalfa builds up and enriches it and that it is important you plant Northern grown seed for best results.

Alfalfa, North Dakota Grown.—Raised under dry farming conditions in Williams County on some of the oldest fields in the State. Choice bold seed which is very hardy.

Per 100 lbs..... \$46.00

Alfalfa, Montana Grown.—Produced on non-irrigated land and from some of the oldest and best established fields in the State. This is hardy, vigorous seed which was produced under the most extreme drouth conditions experienced in Montana during recent years. High in purity and stock which we can recommend to our trade as having been grown on non-irrigated fields.

Per 100 lbs..... \$46.00

Alfalfa, American Grown.—In either Nebraska or Idaho. Shows strong germination and high purity. Some of the best fields in the Northwest have originated from this stock.

Per 100 lbs..... \$42.00

Alfalfa, South Dakota Grown.—Out in the Black Hills district under dry farming conditions on old fields which have withstood many winters, so we can recommend this stock as being perfectly hardy and of highest purity.

Per 100 lbs..... \$45.00

Alfalfa, Grimm, N. D. Grown.—Is characterized by spreading roots instead of one main tap root; it also has a much wider crown than other varieties and is noted for its heavy stooling tendency. Our stocks are strictly Northern grown and come from only such fields as growers are able to make affidavits to the fact that they are furnishing the genuine Grimm variety.

Per 100 lbs..... \$70.00

SCARIFIED CLOVER AND ALFALFA SEED.

We have recently installed a scarifying machine for the treatment of Clover and Alfalfa seed containing a high percentage of what is known as "hard seed." The function of this machine is to crack and scratch the hard shell of the seed, thus enabling it to more readily absorb moisture and grow the first season, when planted in the ground.

Seed treated by this process shows almost a perfect germination, and is supplied at \$2.00 per 100 lbs. over and above the foregoing prices.

Nitragin.—For Clover and Alfalfa inoculation. First quality Nitrogen-fixing bacteria which makes positive a good catch the first season.

SALT BLOCKS FOR STOCK.

Carey-ized Stock Tonic Blocks serve a double purpose in furnishing the necessary salt required for horses and cattle, combined with medicinal ingredients which act as a tonic and worm killer. These blocks are manufactured by the Carey Salt Co. of Hutchinson, Kansas, being pressed into bricks and packed in pasteboard cartons. The 3-lb. bricks are packed twelve to the carton, being designed for use in mangers and feed boxes. The 50-lb. blocks are packed separately, each container having the chemical analysis printed on the exterior.

| | |
|--|--------|
| Carey-ized Stock Tonic Blocks—12 3-lb. bricks, per carton..... | \$2.90 |
| Carey-ized Stock Tonic Blocks—50-lb. bricks, each.... | 3.25 |
